	Rosanna Satin	

CARE OF AFRICAN VIOLETS

Water- Only when the soil is dry on top. Accoring to individual requirement.
 Light- All you can possibly givethem without burning the leaves.
 Fertilize- Sparingly and only after the soil and roots have been dampened
 with plain water several hours before. We use Hyponex & Dairy Compos
 Cleanliness- Spray with clear water regularly. We give ours a bath once a
 week. DO NOT set your plants in the sun until leaves are dry again
 We also spray for any insects that may infest the leaves once
 a month. However, if your plants already have mites, you must
 spray every week. We use NNOR.
 STERELIZE all pots, utensils, and soil before using.
 We use Fumi-Soil Caps for "In the soil pests" and Lindane for pots.
 Never use water softemed by salts or chemicals. Use warm water. Etc.
 P lastic or glazed pots require only about one third as much water as
 clay pots. Do not over-water, Tho plants will not thrive if kept to dry.
